SUMMARY

Computer Science student at BINUS University with a focus on building technology that improves lives. From an ASL gesture recognition model, to an IoT smart cane for visually impaired users. Experienced in Android, Machine Learning, and IoT development, with growing interest in human-centered product design.

EDUCATION

BINUS University - Bandung | Computer Science
| Aug 2024 - Current

PROJECTS

Android & IoT Developer | Feb 2026 - Jun 2026

BINUS University - Bandung, Indonesia

- Design a real-time monitoring system for remote vehicle control, integrating hardware and software across Bluetooth and Android.
- Built gas detection and alert logic using MQ-02 sensor to address safety in enclosed environment.
- Applied MVVM architecture to keep the codebase scalable and maintainable

Machine Learning Developer | Oct 2025 - Jan 2026

BINUS University - Bandung, Indonesia

- Preprocessed image datasets and prepared training data for ASL gesture classification.
- Developed and trained a CNN model using TensorFlow and Keras.
- Evaluated model performance and achieved ~97% validation accuracy with F1-score above 0.99.

IoT & Accessibility Project Developer | Sep 2025 - Dec 2025

BINUS University - Bandung, Indonesia

- Helped with developing an IoT-based smart cane prototype to assist visually impaired users.
 - Implemented obstacle detection feature and system integration.
 - Participated in testing, documentation, and team collaboration throughout development.
-

SKILLS

- | | | |
|--------------------|----------|-----------------------|
| • Java | • Python | • Android development |
| • Machine Learning | • IoT | • Git / Github |
